

Composite elements comprising polyisocyanate polyaddition products

5 Abstract

The invention relates to composite elements which have the following layer structure:

- 10 (i) from 2 to 20 mm of metal,
- (ii) from 10 to 300 mm of polyisocyanate polyaddition products obtainable by reacting (a) isocyanates with (b) compounds reactive toward isocyanates in the presence of at least one inorganic acid, and also of at least one catalyst (d),
- 15 (iii) from 2 to 20 mm of metal.
